OpenAIRE services for research communities

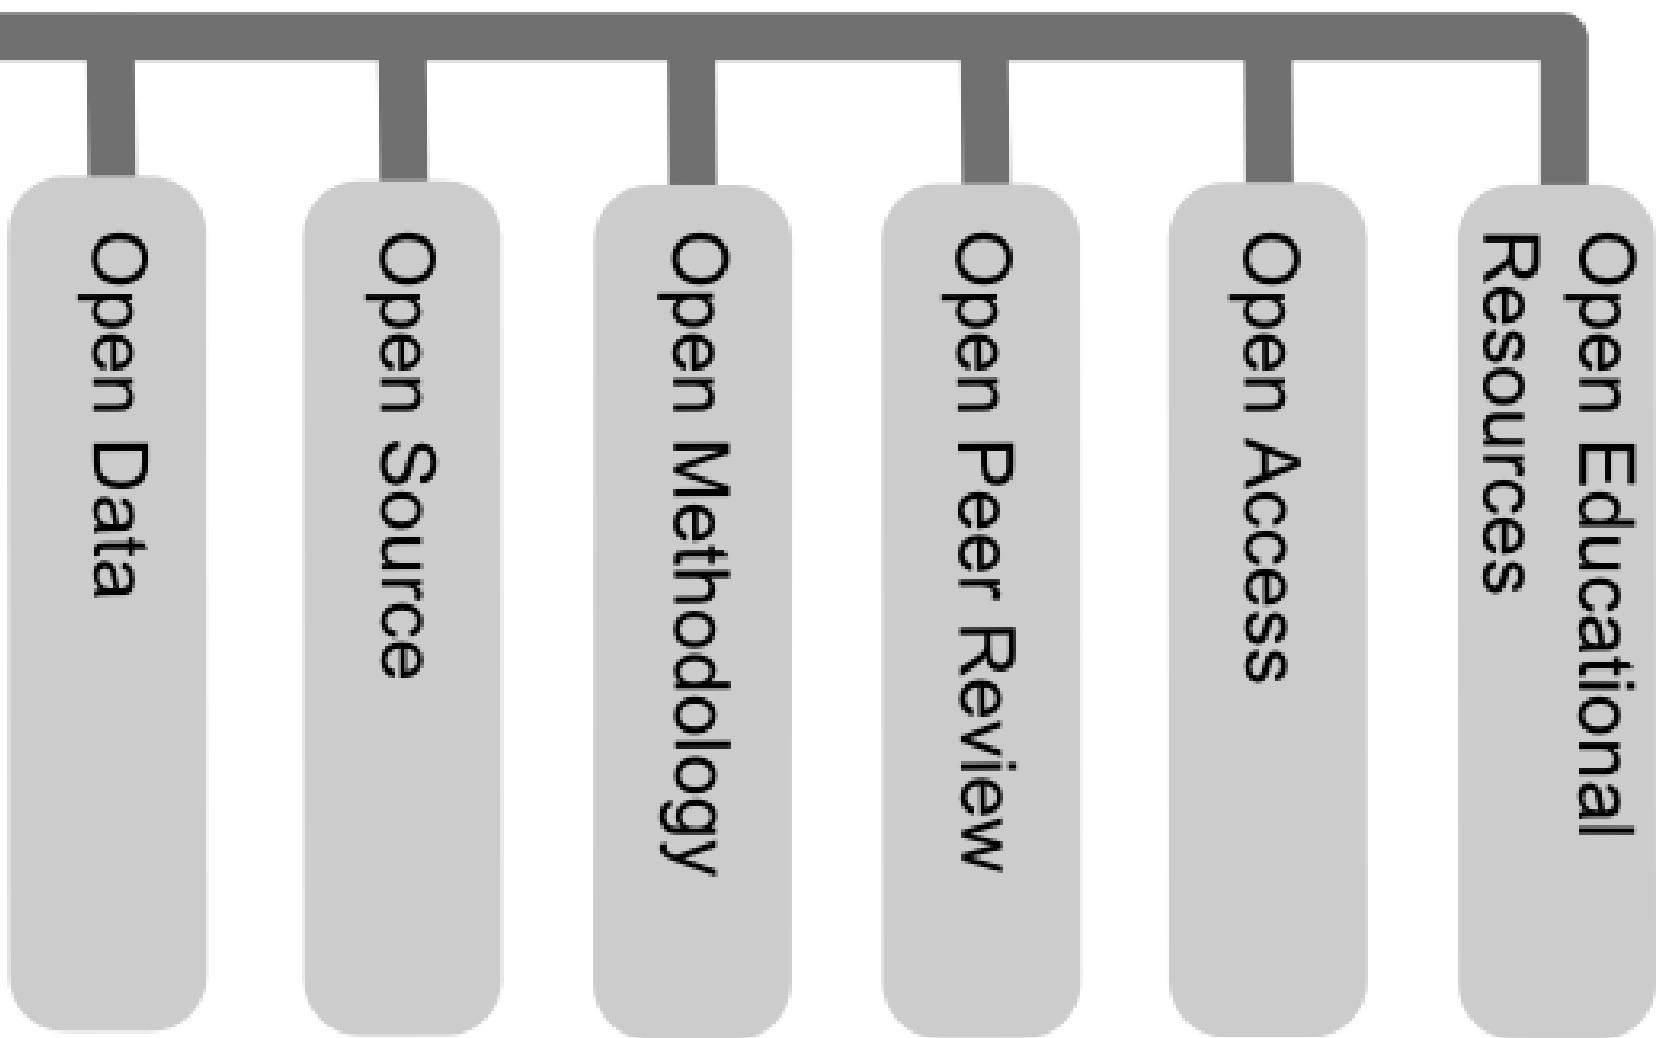

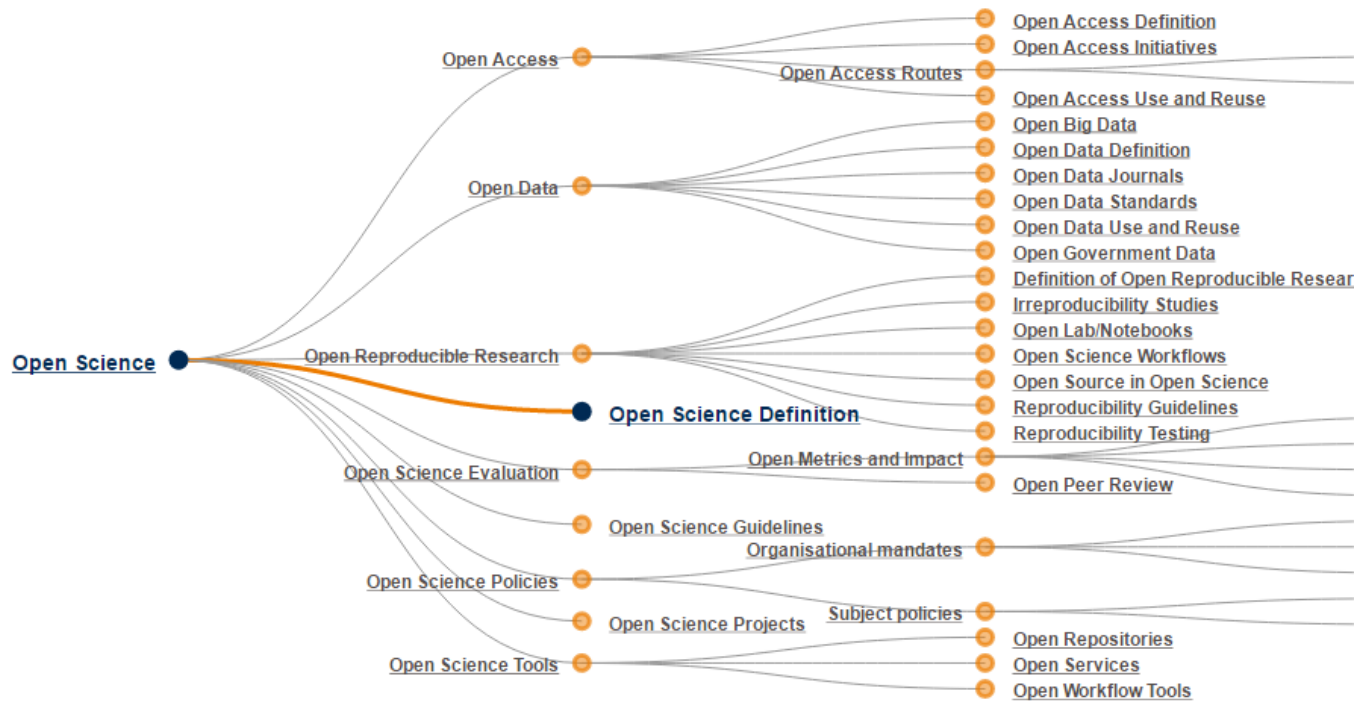

OPENTOX EURO 2017 – Basel, Switzerland

@openaire_eu

Open Science

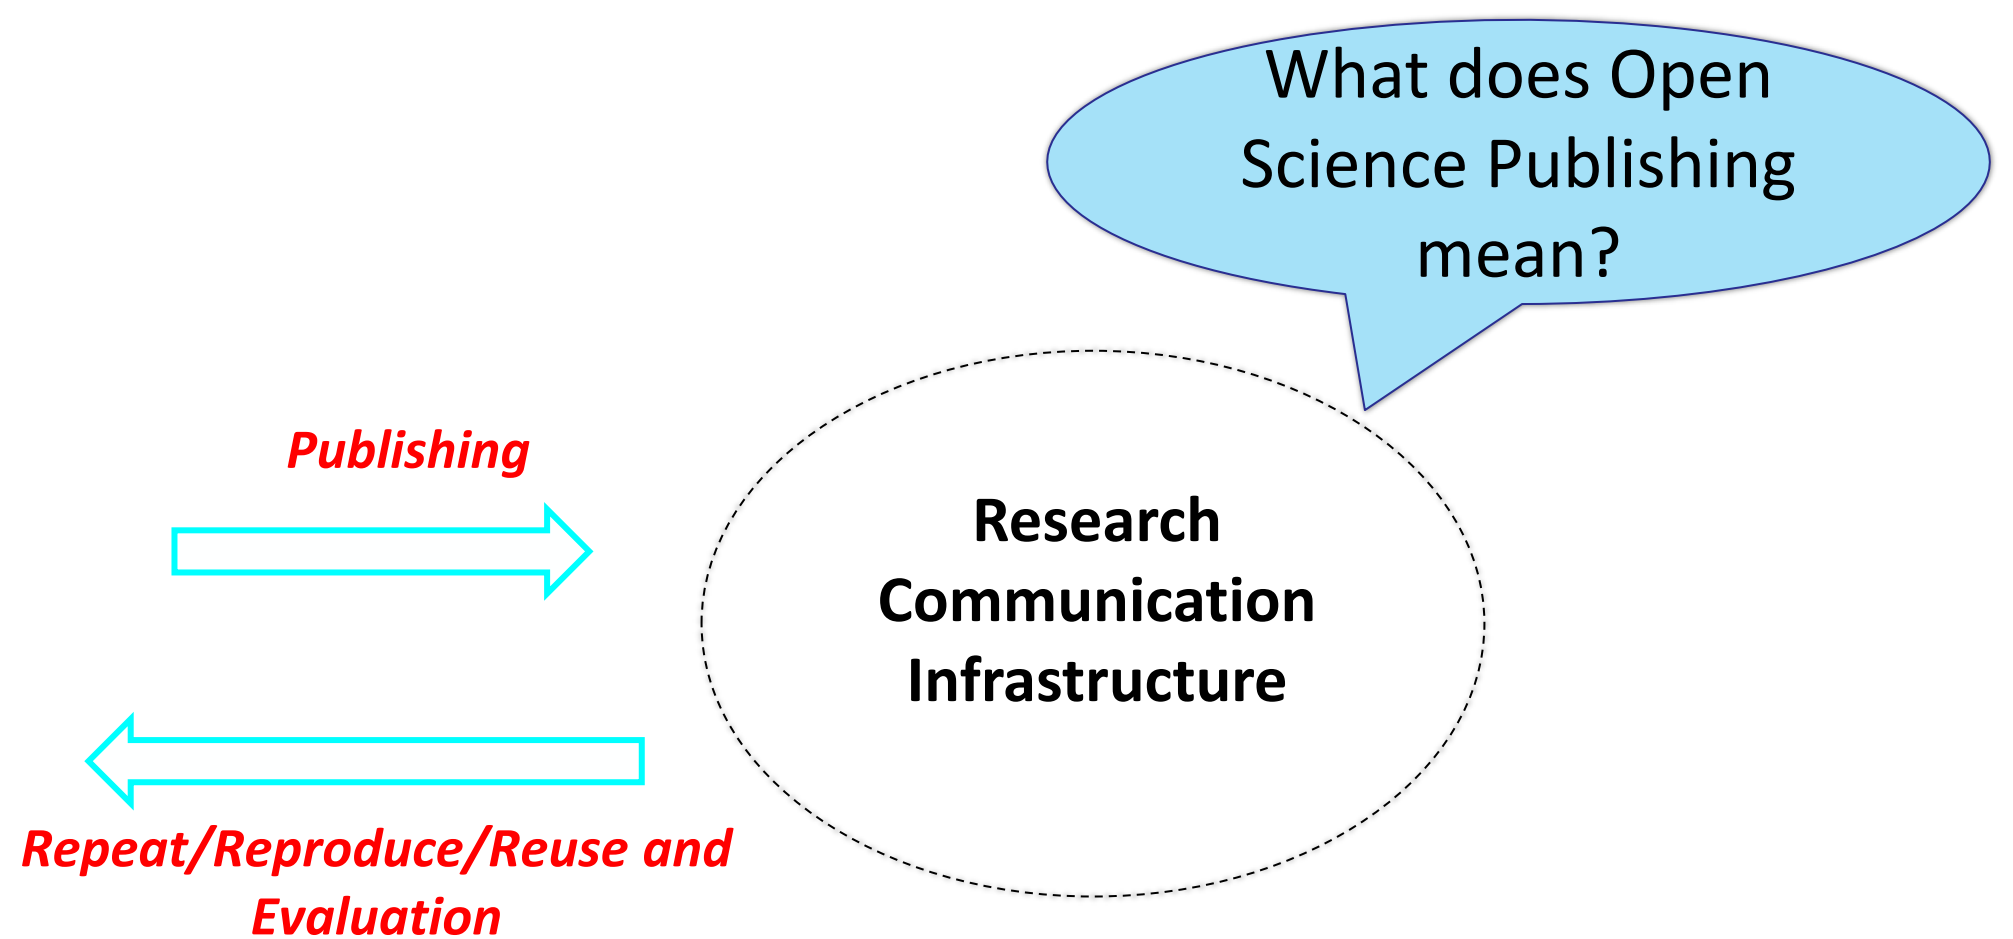

Open Science is the practice of science in such a way that others can **collaborate** and contribute, where research data, lab notes and other research processes are **freely available**, under terms that enable **reuse**, **redistribution** and **reproduction** of the research and its underlying data and methods.

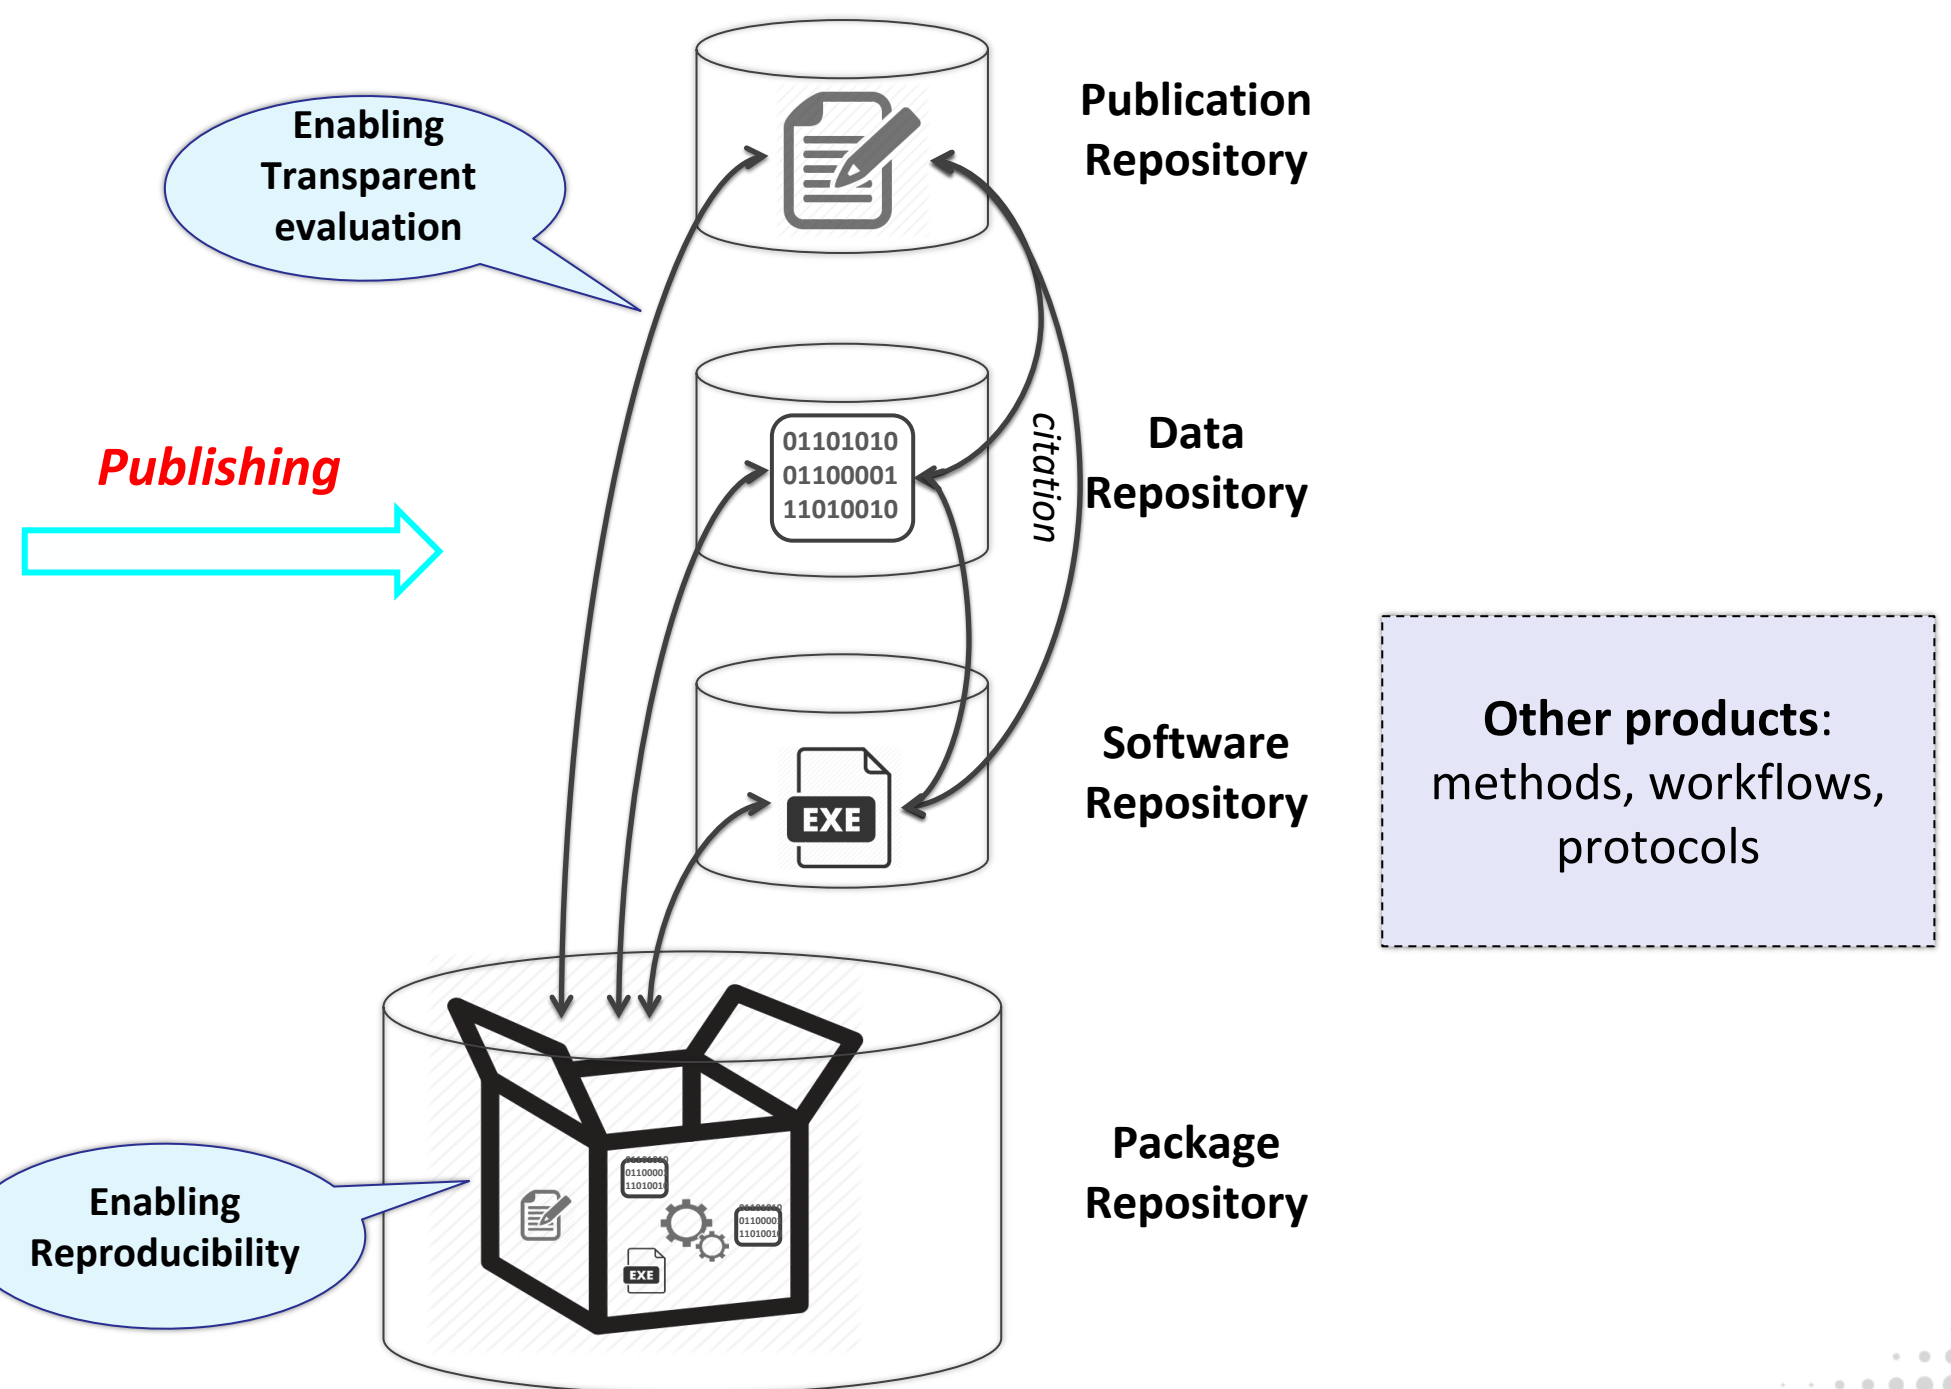

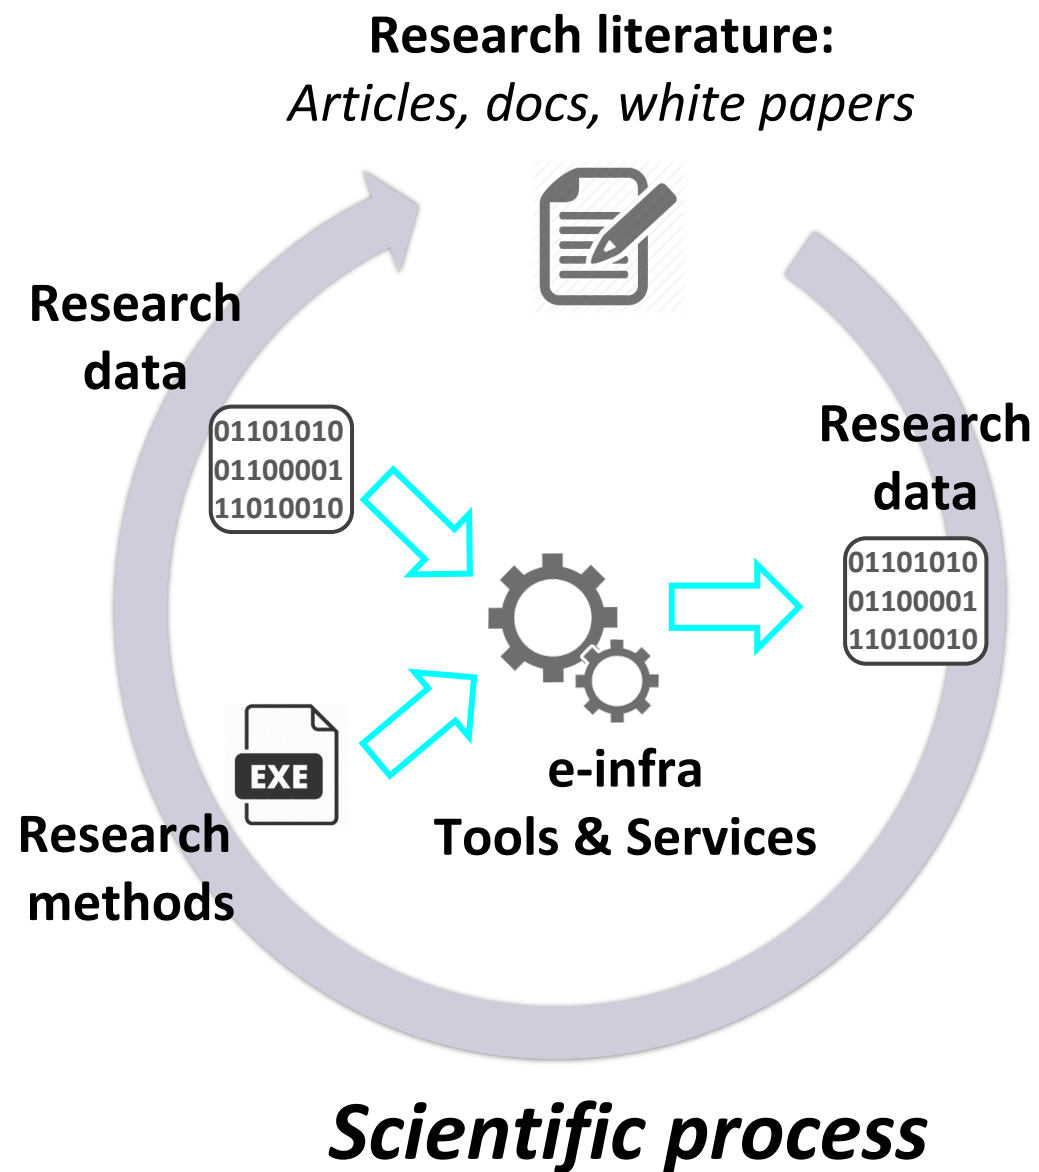

Open Science publishing

Supporting reproducibility and transparent evaluation

Open Science publishing

Supporting reproducibility and transparent evaluation

Open Science publishing: enabling factors

**Enabling transparent
evaluation**

Enabling reproducibility

**Publishing of all kinds of research
artefacts**

Publishing packages of artefacts

**Publishing an up-to-date record of
research artefacts metadata and links**

Why should I embrace Open Science publishing principles?

- **Because your work deserves it**
 - The article you publish is just the **tip of the iceberg!**
 - You designed and implemented software, models, tools, algorithms, workflows, pipelines, etc.: where are they in the scholarly communication?
- **Because you want to be credited**
 - Scientists started to publish their works not for evaluation, but for **credit**.
 - Impact factor came only after the '60s and has been misused since its conception...
- **Because advancement of science requires it**
 - New knowledge is created from existing knowledge and scholarly communication should support the **assessment** of new knowledge: how can you build on top of it otherwise?

Open Science Publishing: barriers

Repositories lack support to Open Science publishing

No support for integration of repositories for software, methods, or packages

Minimal or no support for links between artefacts in different repositories

No support for keeping repositories with up-to-date links between artefacts

Research communities lack culture of Open Science publishing

Lack of e-infrastructure and tools for Open Science: e.g. repository limits above, exchange formats, workflows

Difficulties to **self-organize** and **sustain** research communication solutions: e.g. identify the problems, see the benefits, devise solutions, applying economy of scale

The OpenAIRE Infrastructure

European (and beyond) infrastructure for Open Access and Open Science

Networking infrastructure: Open Access/Science advocacy and support, global alignment and interoperability, etc.

Technical infrastructure: services for monitoring of Open Access/Science and Research Impact for funders and communities

OpenAIRE partners and liasions

This is where you type in the event

OpenAIRE technical infrastructure

Deposit articles/datasets (DOI)

Content:

- 22M+ publications (de-duplicated)
- 3,7M+ publication full-texts
- 600,000+ datasets (linked to publications or projects)
- 1M+ links inferred (and collected) from publications and projects

Collected from:

- 2700+ repositories and journals

ABOUT PUBLICATIONS

PUBLICATIONS PER PROJECT

beta.openaire.eu

Research Communities and Open Science benefits

Common repository for publishing (deposition) of datasets, methods, and packages

- Can continue their publishing practices, but, if needed, they have support for deposition of any artefact

Collaborative curation of a community-specific research communication domain

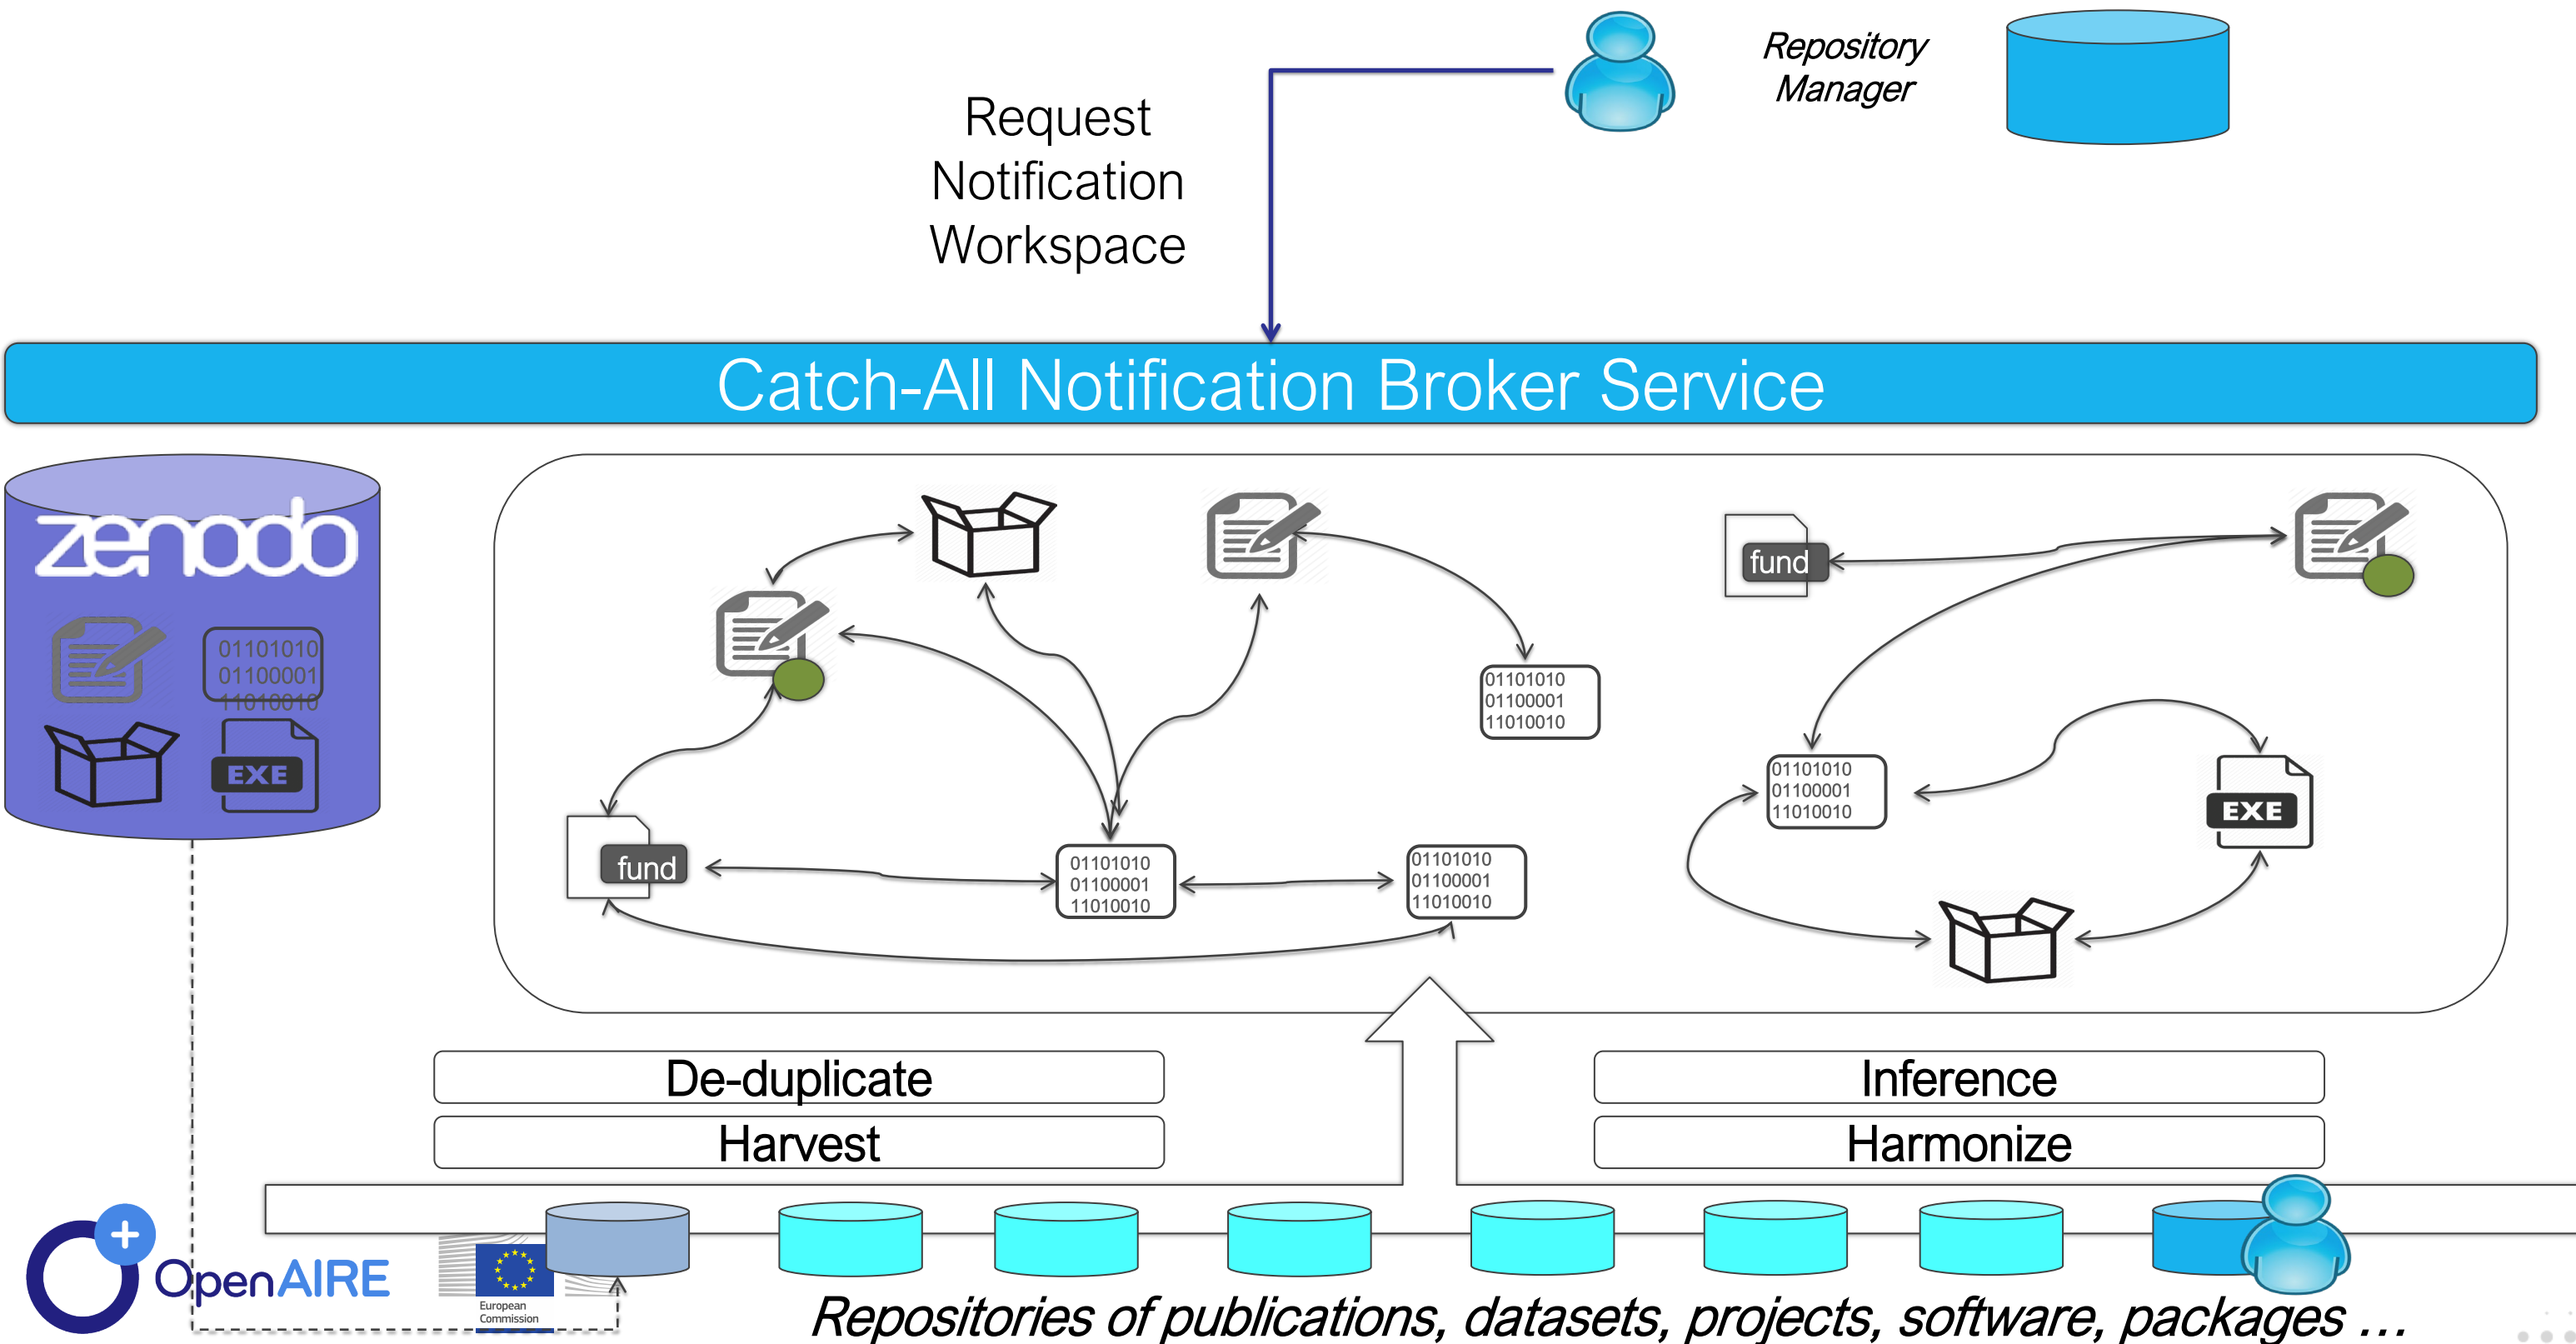

- Community information space to share, discovery, and reuse (reproduce) scientific results

Research impact and statistics

- Scientific reward strategies can be developed

Open Science as-a-service
Catch-all Notification Broker Service

Subscription and Notification for Repositories

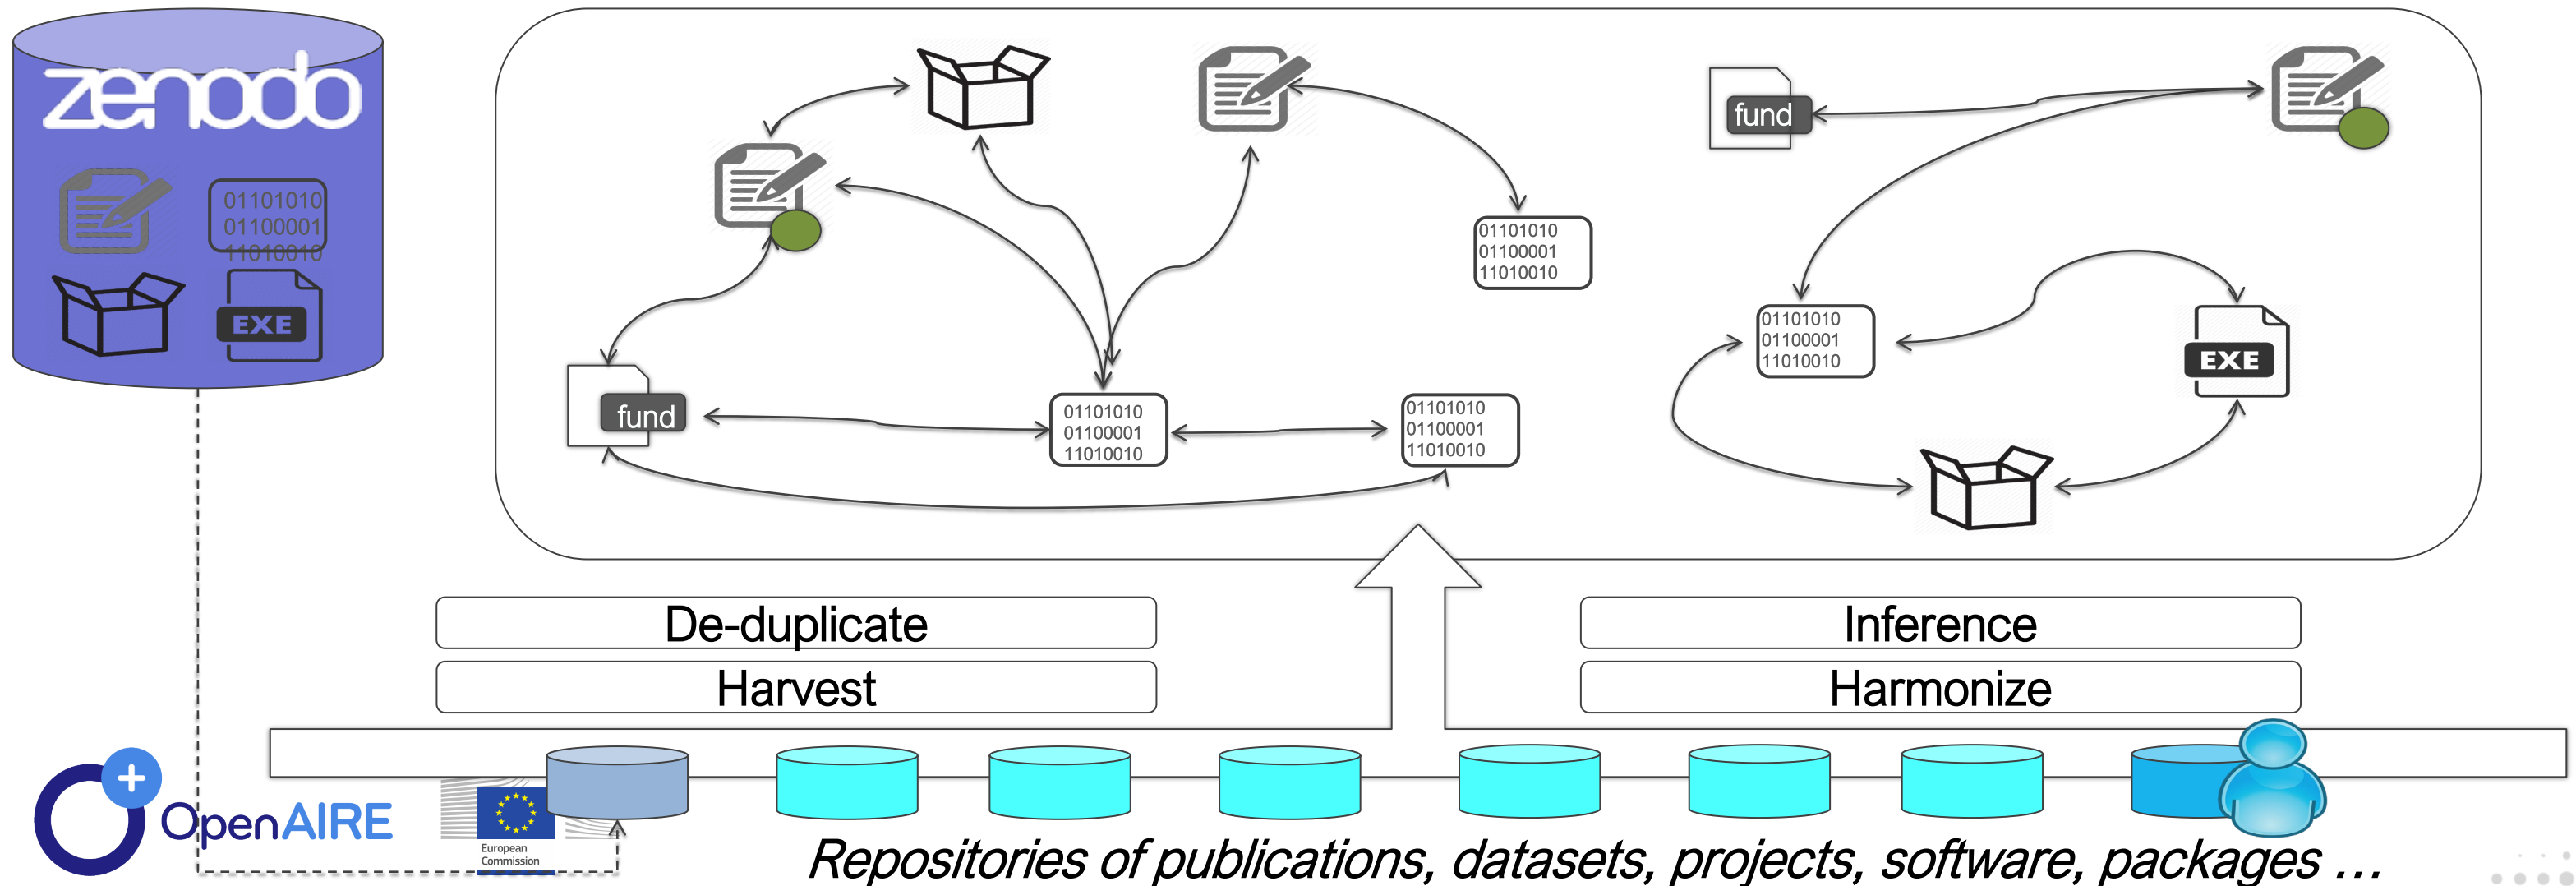

Subscription and Notification for Repositories

- Subscription: enrichment or additions to repository
- Notification management

Catch-All Notification Broker Service

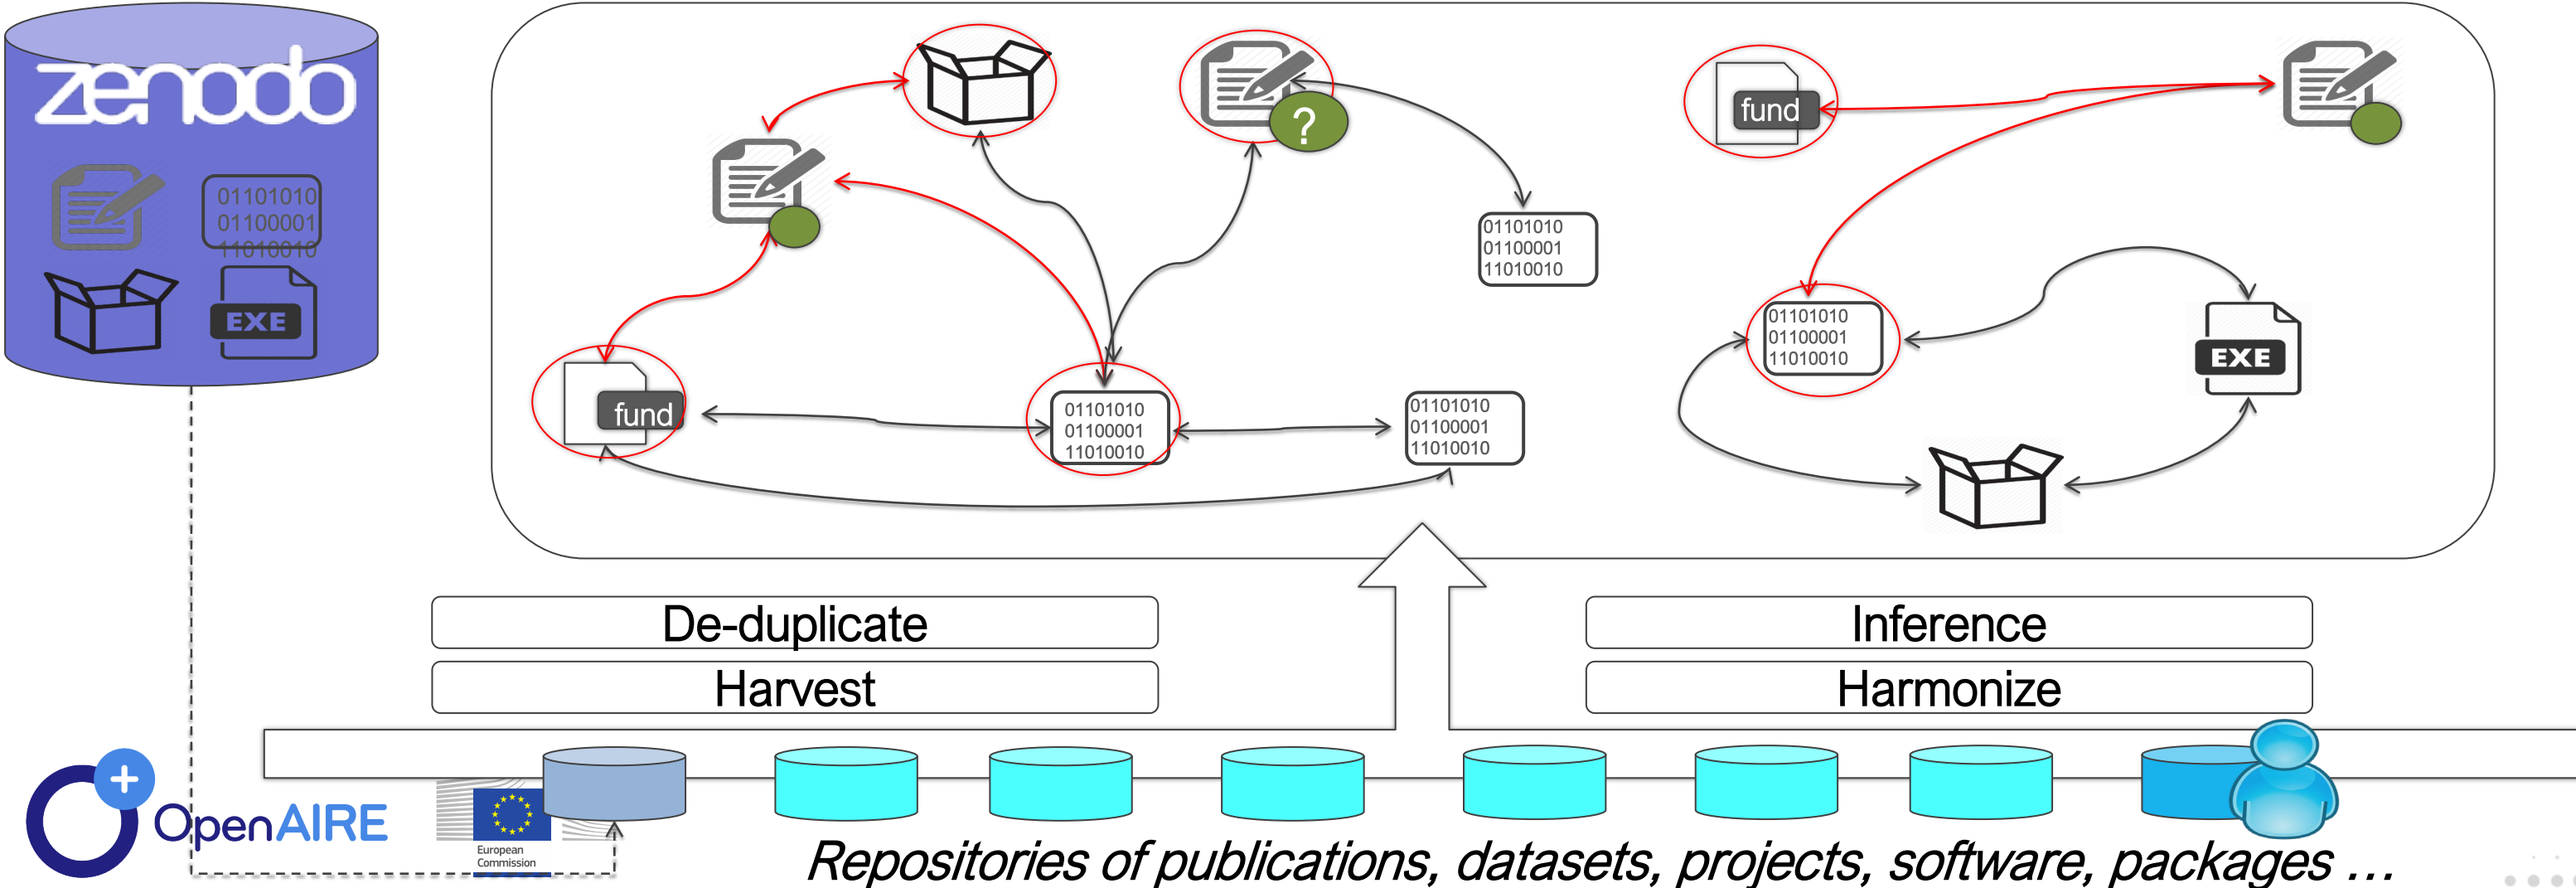

Subscription and Notification for Repositories

- Notification management

Catch-All Notification Broker Service

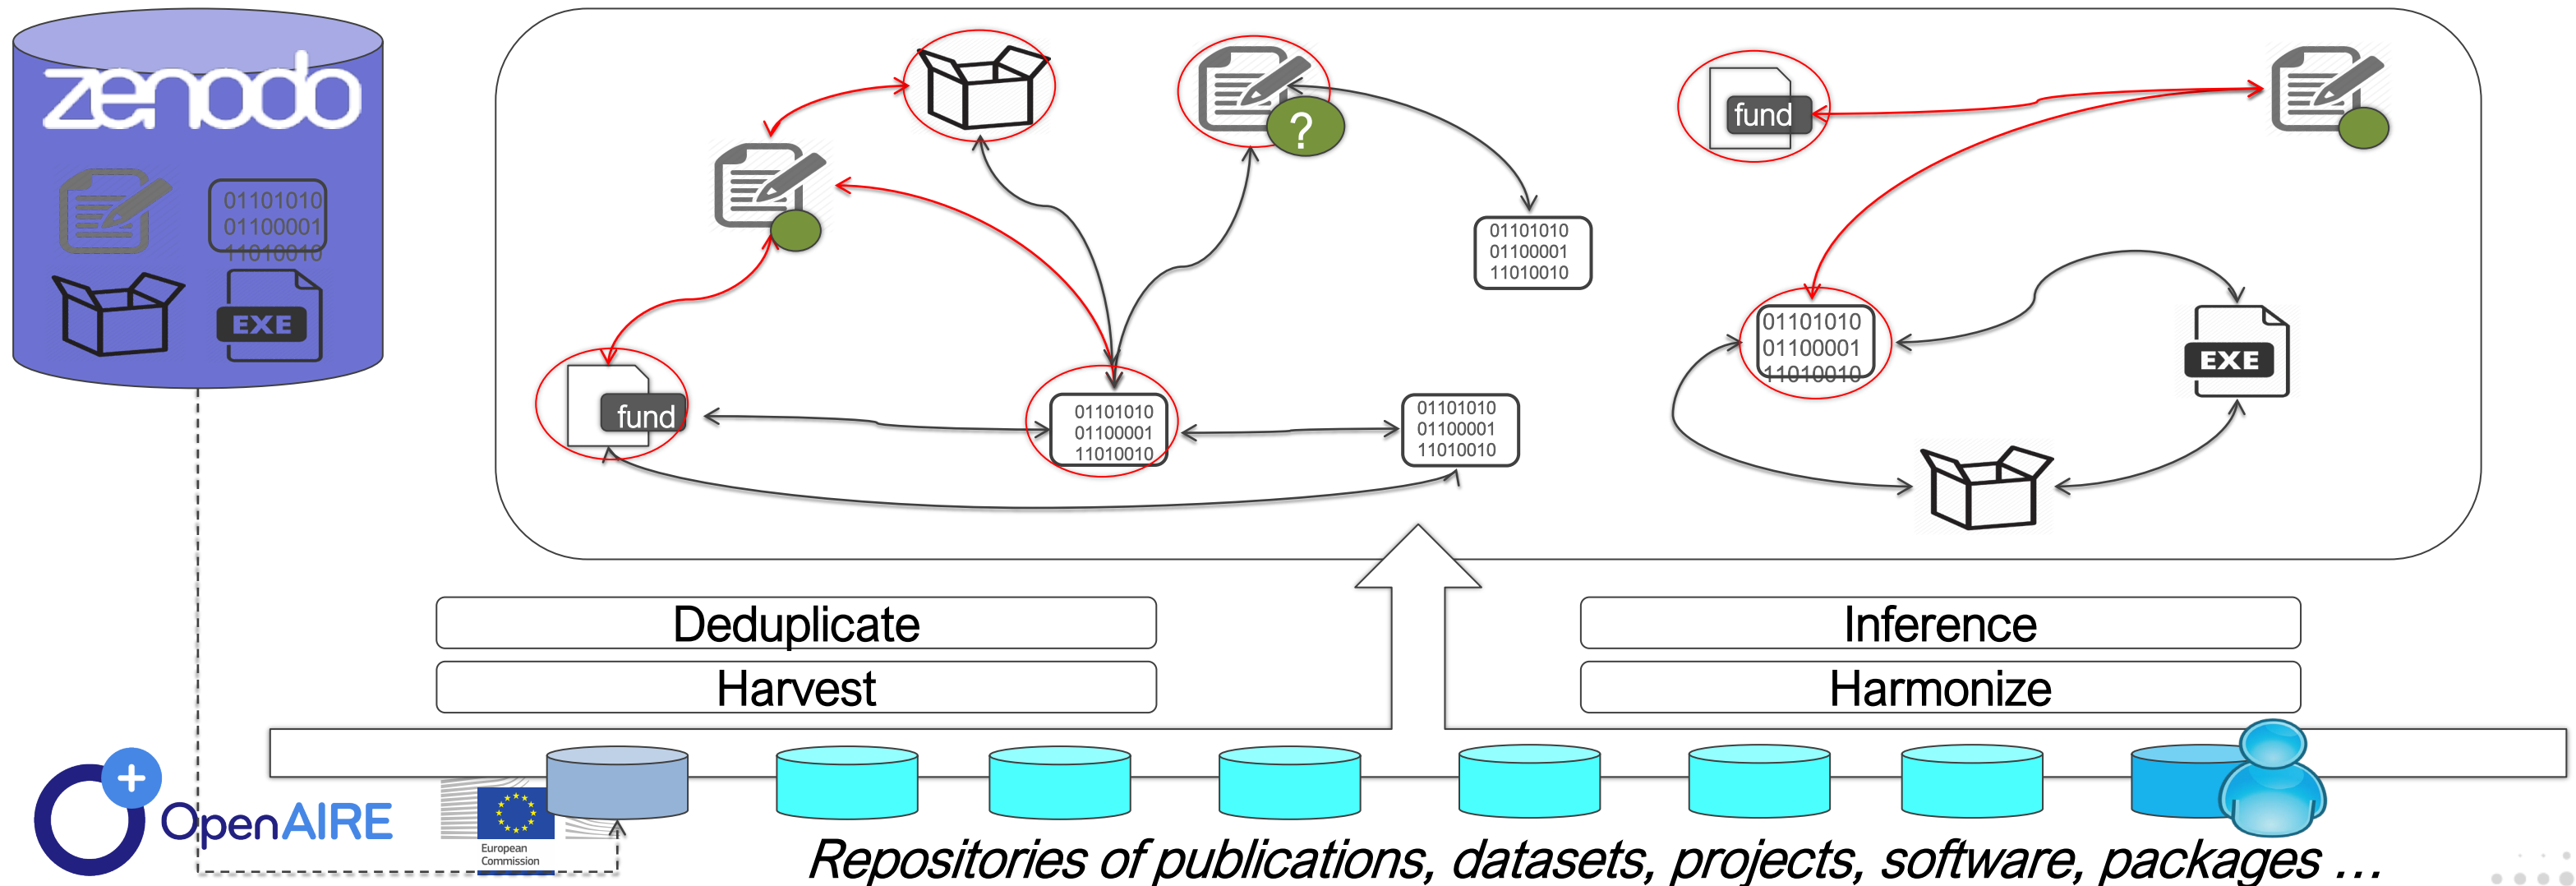

Subscription and Notification for Repositories

- Subscription: enrichment or additions to repository
- Notification management

Catch-All Notification Broker Service

Repositories: Open Science benefits

Extending repository metadata models to Open Science

- Enabling addition of links to artefacts of any kind

Keeping their collection up-to-date: enrichments and additions

- “Almost real-time” exchange of information: notifications about links to other artefacts, missing properties, and missing artefacts

Fostering notification-based and federated dissemination of knowledge

- Enabling repositories to be notified of content of interest, enabling construction of research-focused aggregators by notifications

OpenAIRE towards Open Science

Research Community Dashboard
Catch-All Notification Broker

Served on-demand according to the OSaaS approach

Customizable by different disciplines and providers, each with different practices and maturity levels

Framework aligning communities and repositories on practices addressing transparent evaluation and reproducibility

Thank you!
