

PARALLEL COMPUTING IS EVERYWHERE

# Advances in Parallel Computing

This book series publishes research and development results on all aspects of parallel computing. Topics may include one or more of the following: high speed (HPC) and high throughput computing (HTC) architectures, including grids, clouds, clusters, Service Oriented Architectures, etc., network technology, performance measurement, system software, middleware, algorithm design, development tools, software engineering, services and applications from all scientific and engineering fields, including data science and analytics.

*Series Editor:*

Professor Dr. Gerhard R. Joubert

# Preface

The most powerful computers available and planned for the near future harness the combined compute power of millions of processors. In order to utilise the potential of such large scale parallel systems, major efforts in algorithm design and software development are required. With each new generation of parallel computers, combining ever more processors in one system, the development of software that can efficiently and effectively exploit the full potential of such massive systems becomes more difficult. Alternate architectures and compute paradigms are thus increasingly being investigated in attempts to alleviate these difficulties.

The pervasive presence of heterogeneous and parallel devices in consumer products such as mobile phones, tablets, personal computers and servers, also demands efficient programming environments and applications targeting small scale parallel systems in contrast to large scale supercomputers.

In response to such demands the Parallel Computing (ParCo2017) conference held at Bologna, Italy in September 2017 also included discussions on alternative approaches to achieve High Performance Computing (HPC) capabilities that could potentially surpass Exa- and Zetascale performances. Talks on the application of Quantum Computers and FPGA processors to solve particular compute intensive problems exemplified future possibilities. These developments are mainly aimed at making available more capable systems for solving compute intensive scientific/engineering problems, such as, for example, climate models, security applications as well as classic NP-problems that currently cannot be managed even with the most powerful supercomputers available.

The fast expanding and wide spread use of parallel computers to solve problems emerging from new application fields is as important for future developments as the expansion of systems to achieve higher processing speeds. New application areas such as Robotics, AI and Learning Systems, Data Science, Internet of Things (IoT), In-Car Systems, Autonomous Vehicles, were discussed. Such applications often do not require extreme processing speeds, but rather a high degree of heterogeneous parallelism. These pose particular challenges for the Software Engineering aspects of parallel software, in particular efficiency, reliability, quality assurance and maintainability. Often, these very same systems also pose extreme challenges in terms of power/performance trade-offs, mainly related to limited amounts of power available from batteries and/or to the problems related to heat dissipation.

A further aspect is that, for example, Data Science, IoT and large scale Scientific/Engineering applications, are highly dependent on high speed and broad band communication to transfer huge quantities of data. High throughput systems combined with high performance capabilities are thus increasingly required in practical situations.

As was the case with all previous events in the parallel Computing series of conferences, ParCo2017 attracted a large collection of notable contributions that depict present and future developments in the parallel computing field. During this event the various trends and research areas mentioned above were discussed, either in keynotes, contributed papers or specialised symposia.

This volume, however, represents a selection of papers presented at the conference. Not all contributors could submit their contributions in time and some contributions could not be accepted. The end result is that in these proceedings some papers covering areas mentioned above are not included.

The organisers wish to thank all organisations and individuals who contributed to the success of this event. A particular word of thanks is due to Paola Alberigo, Silvia Monfardini and Claudia Truini for their indispensable role in organising the conference.

Preface	v
<i>Sanzio Bassini, Marco Danelutto, Patrizio Dazzi, Gerhard Joubert and Frans Peters</i>	

Conference Organisation	vii
-------------------------	-----

## Invited Talks

Smart Systems, the Fourth Industrial Revolution and New Challenges in Distributed Computing	3
<i>Didier El Baz and Li Zhu</i>	

## Main Track

### High Performance Scientific Applications

Application of Eisenstat-SSOR Preconditioner to Realistic Stress Analysis Problems by Parallel Cache-Cache Computing	17
<i>Kuniyoshi Abe and Seiji Fujino</i>	

Communication Avoiding Neumann Expansion Preconditioner for LOBPCG Method: Convergence Property of Exact Diagonalization Method for Hubbard Model	27
<i>Susumu Yamada, Toshiyuki Imamura and Masahiko Machida</i>	

Long Range Forces in a Performance Portable Molecular Dynamics Framework	37
<i>William Robert Saunders, James Grant and Eike Hermann Müller</i>	

Porting of the DBCSR Library for Sparse Matrix-Matrix Multiplications to Intel Xeon Phi Systems	47
<i>Iain Bethune, Andreas Glöss, Jürg Hutter, Alfio Lazzaro, Hans Pabst and Fiona Reid</i>	

Benchmarking a Hemodynamics Application on Intel Based HPC Systems	57
<i>Ferdinando Auricchio, Marco Fedele, Marco Ferretti, Adrien Lefieux, Rodrigo Romarowski, Luigi Santangelo and Alessandro Veneziani</i>	

Memetic Phase Retrieval and HPC for the Imaging of Matter at Atomic Resolution	67
<i>Alessandro Colombo, Liberato De Caro and Davide Emilio Galli</i>	

Communication Hiding Pipelined Krylov Methods. On Parallel Performance and Numerical Stability of Pipelined Conjugate Gradients	77
<i>Siegfried Cools and Wim Vanroose</i>	

Solving Sparse Linear Systems of Equations Using Fortran Coarrays	87
<i>Ambra Abdullahi Hassan, Valeria Cardellini and Salvatore Filippone</i>	

Design Towards Modern High Performance Numerical LA Library Enabling Heterogeneity and Flexible Data Formats <i>Toshiyuki Imamura, Daichi Mukunoki, Yusuke Hirota, Susumu Yamada and Masahiko Machida</i>	97
Spectral Acceleration of Parallel Iterative Eigensolvers for Large Scale Scientific Computing <i>Luca Bergamaschi and Ángeles Martínez</i>	107
Scalable Block-Tridiagonal Eigensolvers in the Context of Electronic Structure Calculations <i>Alejandro Lamas Daviña, Xavier Cartoixà and José E. Román</i>	117
A Parallel Scheduling Algorithm to Solve Triangular Band Systems on Multicore Machine <i>Sirine Marrakchi and Mohamed Jemni</i>	127
Parallel Ray Tracing Algorithm for Numerical Analysis in Radiative Media Physics <i>Olga Olkhovskaya, Alexey Kotelnikov, Mikhail Yakobovskiy and Vladimir Gasilov</i>	137
A Parallel Simulator of Quench in Superconducting Magnets <i>Valerio Calvelli, Giuseppe Ciaccio and Fabio Di Benedetto</i>	147
SPUX: Scalable Particle Markov Chain Monte Carlo for Uncertainty Quantification in Stochastic Ecological Models <i>Jonas Šukys and Mira Kattwinkel</i>	159
A Parallel Module for Multiblock Structured Grids in JASMIN and Its Applications <i>Hong Guo, Aiqing Zhang and Zeyao Mo</i>	169
Performance Evaluation and Optimization of MagnetoHydroDynamic Simulation for Planetary Magnetosphere with Xeon Phi KNL <i>Keiichiro Fukazawa, Takeshi Soga, Takayuki Umeda and Takeshi Nanri</i>	178
 <b>Real Time and Adaptive Systems</b>	
Optimizing Communication and Synchronization in CAF Applications <i>Alessandro Fanfarillo, Davide Del Vento and Patrick Nichols</i>	191
State-Aware Concurrency Throttling <i>Daniele De Sensi, Peter Kilpatrick and Massimo Torquati</i>	201
On Architecture for the Future <i>Petascale</i> Computing <i>Luděk Kučera</i>	211
Popularity-Based Caching of CMS Datasets <i>Marco Meoni, Raffaele Perego and Nicola Tonellotto</i>	221
Self-Scheduling for a Heterogeneous Distributed Platform <i>Luis A. García-González, César R. García-Jacas, Liesner Acevedo-Martínez, Rafael A. Trujillo-Rasúa and Dirk Roose</i>	232

CalCul: A Python-Based Workspace for High-Performance Parameters-Sweep  
in Scientific Legacy Codes 242  
*Gal Oren and Guy Malamud*

Comparing Actor System Topologies and Parameters Using *BeCoMe* 252  
*Marco Grebe, Tilman Lacko and Rita Loogen*

### **Energy/Performance Tradeoff**

A Bottleneck-Centric Tuning Policy for Optimizing Energy in Parallel Programs 265  
*Mark Endrei, Chao Jin, Minh Dinh, David Abramson, Heidi Poxon,  
Luiz Derose and Bronis R. De Supinski*

Energy Saving and Thermal Management Opportunities in a Workload-Aware  
MPI Runtime for a Scientific HPC Computing Node 277  
*Daniele Cesarini, Andrea Bartolini and Luca Benini*

Optimizing a RBF Interpolation Solver for Energy on Heterogeneous Systems 287  
*Patrick Schiffmann, Dirk Martin, Gundolf Haase and Günter Offner*

Implications of Reduced-Precision Computations in HPC: Performance, Energy  
and Error 297  
*Stefano Cherubin, Giovanni Agosta, Imane Lasri, Erven Rohou  
and Olivier Sentieys*

Design-Time Analysis for the READEX Tool Suite 307  
*Madhura Kumaraswamy, Anamika Chowdhury and Michael Gerndt*

A Nature-Inspired, Anytime and Parallel Algorithm for Data Stream Clustering 317  
*Giandomenico Spezzano and Andrea Vinci*

### **Accelerators**

GPU-Accelerated and Storage-Efficient Implementation of the QR  
Decomposition 329  
*Peter Benner, Martin Köhler and Carolin Penke*

A Fast Implementation of a Spectral Finite Elements Method on CPU and GPU  
Applied to Ultrasound Propagation 339  
*Carlos Carrascal-Manzanares, Alexandre Imperiale, Gilles Rougeron,  
Vincent Bergeaud and Lionel Lacassagne*

SYCL-BLAS: Combining Expression Trees and Kernel Fusion  
on Heterogeneous Systems 349  
*José I. Aliaga, Ruyman Reyes and Mehdi Goli*

Multi-GPU k-Nearest Neighbor Search in the Context of Data Embedding 359  
*Adrian Klusek and Witold Dzwiniel*

Strategies for Forward Modelling of Infrared Radiative Transfer on GPUs 369  
*P.F. Baumeister, B. Rombach, T. Hater, S. Griessbach, L. Hoffmann,  
M. Bühler and D. Pleiter*

Deeply Heterogeneous Many-Accelerator Infrastructure for HPC Architecture Exploration	381
<i>J. Flich, A. Cilaro, M. Kovaç, R. Tornero, M. Gagliardi, E. Fusella, J.M. Martínez and T. Picornell</i>	
Towards a Unified CPU–GPU Code Hybridization: A GPU Based Optimization Strategy Efficient on Other Modern Architectures	390
<i>Ludomir Oteski, Guillaume Colin De Verdière, Sylvain Contassot-Vivier, Stéphane Vialle and Juliet Ryan</i>	
Vectorization Strategies for Ant Colony Optimization on Intel Architectures	400
<i>Victoriano Montesinos and José M. García</i>	
<b>Graphs and Big Data</b>	
Using Complex-Network Properties for Efficient Graph Analysis	413
<i>Thomas Messi Nguélé, Maurice Tchuenta and Jean-François Méhaut</i>	
Characterization of Genomic Data Using Graph Databases	423
<i>Mattia D’Antonio, Paolo D’Onorio De Meo, Claudio Cacciari and Giuseppe Fiameni</i>	
Optimal Nine Node Diffusion for Special Torus Graphs	433
<i>K. Dimitrakopoulou</i>	
<b>Load Balancing and Fault Tolerance</b>	
Improving the Performance of Parallel SpMV Operations on NUMA Systems with Adaptive Load Balancing	445
<i>Christian Neugebauer, Rudolf Berrendorf and Florian Mannuss</i>	
Load Balancing with p4est for Short-Range Molecular Dynamics with ESPResSo	455
<i>Steffen Hirschmann, Malte Brunn, Michael Lahnert, Colin W. Glass, Miriam Mehl and Dirk Pflüger</i>	
Dynamic Load Balancing of Monte Carlo Particle Transport Applications on HPC Clusters	465
<i>Thomas Gonçalves, Marc Pérache, Frédéric Desprez and Jean-François Méhaut</i>	
Enabling Application-Integrated Proactive Fault Tolerance	475
<i>Dai Yang, Josef Weidendorfer, Carsten Trinitis, Tilman Küstner and Sibylle Ziegler</i>	
Parallel IO in the LFRic Infrastructure	485
<i>Samantha V. Adams, Olga Abramkina, Yann Meurdesoif and Mike Rezny</i>	
<b>Compiler Directives for Parallel Computing</b>	
Task Based Parallelism with OpenMP: A Case Study with DL_POLY_4	497
<i>Aidan B.G. Chalk and Alin M. Elena</i>	

An Efficient SIMD Implementation of Pseudo-Verlet Lists for Neighbour Interactions in Particle-Based Codes	507
<i>James S. Willis, Matthieu Schaller, Pedro Gonnet, Richard G. Bower and Peter W. Draper</i>	
Exploiting Hierarchical Parallelism in an Astrophysical Equation of State Using OpenACC and OpenMP	517
<i>O.E. Bronson Messer and Thomas Papatheodore</i>	
On the Implementation of OpenMP and Hybrid MPI/OpenMP Parallelization Strategies for an Explicit DG Solver	527
<i>Andrea Crivellini and Matteo Franciolini</i>	
<b>AI and Machine Learning</b>	
Implementing Deep Neural Networks on Fresh Breeze	539
<i>Jack B. Dennis, Lei Huang, Willie Lim, Hsiang-Huang Wu and Yuzhong Yan</i>	
A Performance Study of Machine and Deep Learning Frameworks on Cineca HPC Systems	550
<i>Riccardo Zanella, Giuseppe Fiameni and Marco Rorro</i>	
<b>High Level Programming Models</b>	
Towards Distributed Parallel Programming Support for the SPar DSL	563
<i>Dalvan Griebler and Luiz Gustavo Fernandes</i>	
High-Level Parallel Implementation of Swarm Intelligence-Based Optimization Algorithms with Algorithmic Skeletons	573
<i>Fabian Wrede, Breno Augusto De Melo Menezes, Luis Filipe De Araujo Pessoa, Bernd Hellingrath, Fernando Buarque De Lima Neto and Herbert Kuchen</i>	
Distributed Event-Based Computing	583
<i>Andrew Brown, David Thomas, Jeff Reeve, Ghaith Tarawneh, Alessandro De Gennaro, Andrey Mokhov, Matthew Naylor and Tom Kazmierski</i>	
<b>Cloud</b>	
Adaptive Execution of Parallel Programs on Grids and Clouds	595
<i>Jaroslaw Slawinski and Vaidy Sunderam</i>	
Scientific Workflows on Clouds with Heterogeneous and Preemptible Instances	605
<i>Fabio Tordini, Marco Aldinucci, Paolo Viviani, Ivan Merelli and Pietro Liò</i>	

## Mini Symposia

### ParaFPGA 2017

- ParaFPGA 2017: Enlarging the Scope of Parallel Programming with FPGAs 619  
*Erik H. D'Hollander and Abdellah Touhafi*
- Bridging the Gap Between Software and Hardware Designers Using High-Level Synthesis 622  
*Christian Pilato*
- Pipelined Streaming Computation of Histogram in FPGA OpenCL 632  
*Mohammad Hosseinabady and Jose Luis Nunez-Yanez*
- Implementation of the K-Means Algorithm on Heterogeneous Devices: A Use Case Based on an Industrial Dataset 642  
*Ying hao Xu, Miquel Vidal, Beñat Arejita, Javier Diaz, Carlos Alvarez, Daniel Jiménez-González, Xavier Martorell and Filippo Mantovani*
- On Coding Techniques for Targeting FPGAs via OpenCL 652  
*Nuno Paulino, Luís Reis and João M.P. Cardoso*
- Highly Parallel Lattice QCD Wilson Dirac Operator with FPGAs 664  
*Thomas Janson and Udo Kebschull*

### REPARA 2017

- RePara 2017 MiniSymposium: The 3<sup>rd</sup> International Workshop on Reengineering for Parallelism in Heterogeneous Parallel Platforms 675  
*José Daniel Garcia Sanchez*
- Simultaneous Multiprocessing on a FPGA+CPU Heterogeneous System-On-Chip 677  
*Jose Nunez-Yanez, Mohammad Hosseinabady, Andrés Rodríguez, Rafael Asenjo, Angeles Navarro, Rubén Gran-Tejero and Darío Suárez-Gracia*
- A Tool to Support FastFlow Program Design 687  
*Leonardo Gazzarri and Marco Danelutto*
- Higher-Level Parallelism Abstractions for Video Applications with SPAR 698  
*Dalvan Griebler, Renato B. Hoffmann, Marco Danelutto and Luiz G. Fernandes*
- Towards a Software Transactional Memory for Heterogeneous CPU-GPU Processors 708  
*Alejandro Villegas, Angeles Navarro, Rafael Asenjo and Oscar Plata*

## Energy Aware Scientific Computing on Low Power and Heterogeneous Architectures

- MiniSymposium on Energy Aware Scientific Computing on Low Power and Heterogeneous Architectures 721  
*Daniele Cesini, Sebastiano Fabio Schifano, Tommaso Boccali and Piero Vicini*
- Multi-Node Advanced Performance and Power Analysis with Paraver 723  
*Filippo Mantovani and Enrico Calore*
- Energy-Efficiency Evaluation of Intel KNL for HPC Workloads 733  
*Enrico Calore, Alessandro Gabbana, Sebastiano Fabio Schifano and Raffaele Tripiccione*
- Optimization of Finite-Differencing Kernels for Numerical Relativity Applications 743  
*Roberto Alfieri, Sebastiano Bernuzzi, Albino Perego and David Radice*
- Large Scale Low Power Computing System: Status of Network Design in ExaNeSt and EuroExa Projects 750  
*Roberto Ammendola, Andrea Biagioni, Fabrizio Capuani, Paolo Cretaro, Giulia De Bonis, Francesca Lo Cicero, Alessandro Lonardo, Michele Martinelli, Pier Stanislao Paolucci, Elena Pastorelli, Luca Pontisso, Francesco Simula and Piero Vicini*
- The Brain on Low Power Architectures: Efficient Simulation of Cortical Slow Waves and Asynchronous States 760  
*Roberto Ammendola, Andrea Biagioni, Fabrizio Capuani, Paolo Cretaro, Giulia De Bonis, Francesca Lo Cicero, Alessandro Lonardo, Michele Martinelli, Pier Stanislao Paolucci, Elena Pastorelli, Luca Pontisso, Francesco Simula and Piero Vicini*
- The INFN COSA Project: Low-Power Computing and Storage 770  
*Daniele Cesini, Elena Corni, Antonio Falabella, Andrea Ferraro, Luca Lama, Lucia Morganti, Enrico Calore, Sebastiano Fabio Schifano, Michele Michelotto, Roberto Alfieri, Roberto De Pietri, Tommaso Boccali, Andrea Biagioni, Francesca Lo Cicero, Alessandro Lonardo, Michele Martinelli, Pier Stanislao Paolucci, Elena Pastorelli and Piero Vicini*

## Edge Computing

- MiniSymposium on Edge Computing 783  
*Christos D. Antonopoulos and Dimitrios S. Nikolopoulos*
- Edge-as-a-Service: Towards Distributed Cloud Architectures 784  
*Blesson Varghese, Nan Wang, Jianyu Li and Dimitrios S. Nikolopoulos*
- Flexible Distributed Computing Across End-Devices, the Edge and the Cloud 794  
*Alexandros Patras, Spyros Lalis and Christos D. Antonopoulos*

Power Modelling for Heterogeneous Cloud-Edge Data Centers <i>Kai Chen, Blesson Varghese, Peter Kilpatrick and Dimitrios S. Nikolopoulos</i>	804
Edge and Cloud Provider Cost Minimization by Exploiting Extended Voltage and Frequency Margins <i>Christos Kalogirou, Panos Koutsovasilis, Manolis Maroudas, Christos D. Antonopoulos, Spyros Lalis and Nikolaos Bellas</i>	814
Subject Index	825
Author Index	829
