

# Welcome from the Demo Chairs

It is with great pleasure that we welcome you to the PerCom Demo session that will be part of the 20th IEEE Pervasive Computing and Communication (PerCom) conference in Pisa, Italy. The PerCom Demo session provides a venue for the latest breakthroughs in pervasive computing to be presented live to the research community. PerCom Demos include examples of working prototypes, novel applications, groundbreaking ideas, and live experiments related to PerCom topics.

This year we had 27 demo proposals submitted and 20 of them have been accepted by the committee. These papers address important problems in several application domains ranging from IoT, wearable and mobile devices, activity tracking, and autonomous driving. During PerCom, one of the selected demos receive the "Best Demo Award" on the basis of its research value, originality, and presentation. We thank all the authors who submitted their innovative demo papers to PerCom this year, and the program committee members for volunteering their time and hard for the benefit of the PerCom community by providing high-quality reviews.

Michele Girolami and Ella Peltonen, PerCom Demos co-chairs
